

FOR IMMEDIATE RELEASE:

**Gain up to 78 Horsepower with Superchips' Flashpaq Programmer
for 2008 Ford 6.4L Powerstroke F250/F350**

Sanford, FL - Superchips announces the release of their newest Flashpaq for 2008 6.4L Ford Powerstroke F250/F350 (p/n 1808). Users can gain up to **78 BHP horsepower and 146 Ft/Lbs torque with the Flashpaq**. The Flashpaq for the 6.4L Ford is the only programmer on the market that will tune both the engine and transmission for optimal performance. Consumers can update their Flashpaq with the latest programs and add new features via the internet in a matter of minutes.

The **1808** Flashpaq comes with many of the same great features that Superchips' users have come to love, including three performance tunes to enhance both power and drivability. These features include the ability to save stock settings, program for performance or towing applications and even independently setup the transmission for improved drivability and performance, as well as read and clear diagnostic trouble codes, and finally raise the vehicle speed limiter. Recalibration of speedometer/odometer for tire size changes is an added feature that will be offered in the future via a free Internet update. Superchips will also offer custom "Redline" race tunes meant for extreme off-road or race-use only.

Flashpaq programmers are fully updateable using a very simple software utility that can be downloaded to your PC via www.flashpaq.com.

Whether you need power, better drivability, or improved mileage Superchips can provide it. Superchips offers a complete line of hand-held tuners and other performance products for most late-model domestic cars, trucks and SUVs. For more information please contact:
